RoHS and WEEE conformity statements

As a company, Laser SOS actively embraces its legal and environmental obligations outlined by the WEEE and RoHS directives. We see these regulations as a positive and responsible change to protect the environment.

RoHS

All products that are subject to the European Community directive 2002/95/EC supplied by Laser SOS from 1st July 2006 are compliant with the requirements. Such products are marked with the RoHS symbol (adjacent).

WEEE

All products that are subject to the WEEE Directive 2002/96/EC supplied by Laser SOS from 13th August 2005 are compliant with the WEEE marking requirements. Such products are marked with the “crossed out wheelie bin” WEEE symbol shown on the left in accordance with European Standard EN 50419. Our WEEE Producer registration number is WEE/EF0248QZ.

DEIONIZATION CARTRIDGES & PARTICLE FILTERS

For Lamp and Diode Pumped Laser Systems

Laser S.O.S. provides the solid state laser industry with a comprehensive range of Deionising Cartridges and Particle Filters. Available for most leading Brands of solid state lasers.

The cooling water used in lamp and diode solid state laser must be deionised. Systems should use steam distilled water or DI water. The quality of the water is maintained by the use of Particle Filters and Deionisation Cartridges. The Deionisation Cartridge maintains the resistivity of the water at 1 to 2 Meg Ohms/cm² which is required for efficient laser operation. Problems such as laser lamp ignition will result should the water purity drops below the required resistivity level.

Water quality should be checked regularly. It is highly recommended for systems that run 24/7 should typically replace the water every 6 months. Please also check validity dates on some of the deionisation.

Particle filters are fitted to prevent deposition of particulates and debris on to the pump cavity, laser lamp, flow tubes and the water cooling loop.
